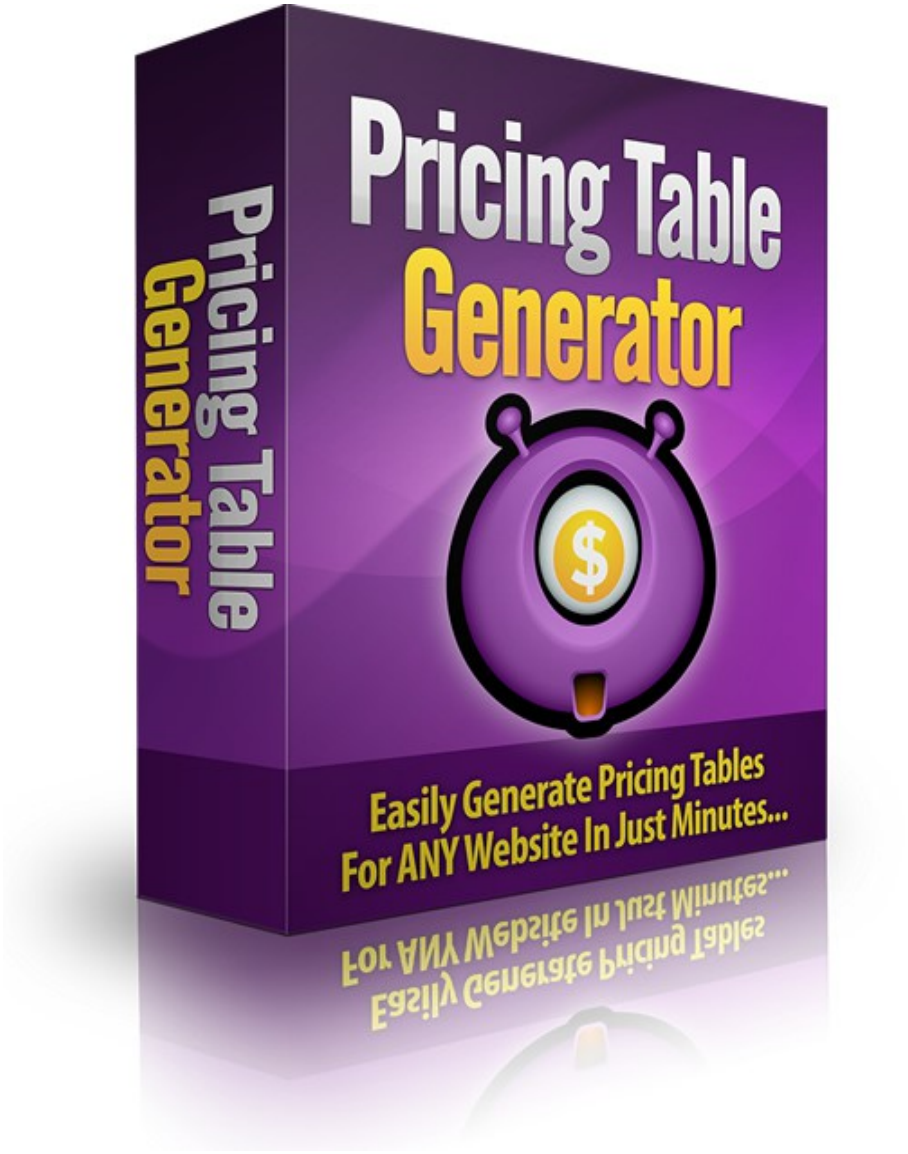
USER MANUAL



"Thank You For Downloading "Pricing Table Generator v.2.1.0"

Installation

No installation needed!

Just double click on the "PricingTableGenerator.exe" file you found in this folder to open software.

How To Use

This software is designed to be very easy to use.

All you really have to do is fill in information the way you would do when you are filling out any other form.

Step #1:

Open up the software.

Step #2:

Simply follow the instructions in the software filling in the required information as you go.

Step #3

Once, you are done, you can save the Pricing Table code as a text file on your computer or copy it to clipboard.

Step #4

Follow the instructions that are included with the code to paste it into where you want your pricing table to appear.

Step #5

Upload your edited HTML file to your web server. Your pricing table should appear on your web page.

Important User Tips

User Tip #1: When the field asks you to enter your color choice, the color codes in the example given as default color are the same color codes as in the demo page. You can just use copy and use those to create a pricing table quickly.

User Tip #2: Before you enter your information in the software, just list all your features plus their values for all your plans in a text file. It will be easier to copy these from there and paste into the software, instead of going back and forth.

User Tip #3: The software was designed so that you enter your Features once on the screen for the first plan and then, all you have to do is enter the values for the other too. It is therefore important that you remember the order of your features. Hence the tip above, recommends that you use a notepad.

User Tip #4: Use the color picker link on the first screen of the software to select your colors. They offer an option for gradient colors on that page, you can play with those for your table color scheme.

User Tip #5: For the order buttons, the if you make the background color darker than the hover color, your button will have a rounded or curved appearance. With will switch colors from top to bottom as your mouse hovers on the button.

User Tip #6: For your Feature Values, try keep them as short as possible. There is not too much space available in the tables. So try keep them short, sweet and straight to the point. You can always go back to edit any long sentences.

Have fun with the software! :)
